-- FUNCTION: COMPONENT OF THE CUTICLES. IT FORMS A RIBBON
-- APPROXIMATELY 2 MICRONS WIDE RUNNING ALONG THE LATERAL LINES
UNDERNEATH THE ALAE. CONTRIBUTES TO THE FORMATION OF EXTRACELLULAR
ENVELOPES PROTECTING THE ORGANISM FROM THE ENVIRONMENT.
-- SUBCELLULAR LOCATION. SECRETED.
-- TISSUE SPECIFICITY: LOCALIZED IN A NARROW BAND NOT EXPOSED
TO THE EXTERIOR, RUNNING UNDERNEATH THE ALAE.
-- IDEVELOPMENTAL STAGE: EXPRESSED DURING DAUER LARVA FORMATION.
-- DOMAIN: THE SMALL REPEATS A-A-P-[AVI] ARE ALSO PRESENT IN MANY
PROTEINS CONSTITUTING THE PROTECTIVE ENVELOPE OF OTHER SPECIES.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         This SWISS-PROT entry is copyright.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                PATHWAY: FIRST AND SECOND STEP IN PYRIMIDINE BIOSYNTHESIS.
MISCELLANBOUS: GATASE (GLUTAMINE AMIDOTRANSFERASE) AND CPSAS
(CARBAMOYL PHOSPHATE SYNTHASE) FORM TOGETHER THE
GLUTAMINE-DEPENDENT CPSASE (GD-CPSASE) (EC 6.3.5.5).
MISCELLANEOUS: IN EUKARYOTES EC 6.3.5.5 IS SYNTHESIZED BY TW
PATHWAY-SPECIFIC (ARGININE AND PYRIMIDINE) UNDER SEPARATE CO
SIMILARITY: THE CRASES DOMAIN IS SIMILAR TO OTHER CPASES.
SIMILARITY: THIS PROTEIN CONTAINS A DEFECTIVE DHOASE DOMAIN.
SIMILARITY: THE GATASE DOMAIN BELONGS TO TYPE-1 GLUTAMINE
NATIOUTEAUSCEPANCES.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                COCK K., CHURCHER C.M., BARRELL B.G., RAJANDREAM M.A., mitted (CCT-1995) to the EMBL/GenBank/DDBJ databases. THE ACTIVITY OF THIS RECEPTOR IS MEDIATED BY G PROTEINS WHICH INHIBIT ADENYLYL CYCLASE.
-1- SUBCELLULAR LOCATION: INTEGRAL MEMBRANE PROTEIN.
-1- TISSUE SPECIFICITY: PROMINENT IN THE PITUITARY AND SMALL INTESTINE. LOW LEVELS IN ISLETS AND SPLEEN. NOT DETECTED IN
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              O'CARROLL A.-M., LOLAIT S.J., KONIG M., MAHAN L.C.;
"MOLecular cloning and expression of a pituitary somatostatin receptor with preferential affinity for somatostatin-28.";

Biochem. Biophys. Res. Commun. 169:551-558(1990).

-!- FUNCTION: C-TERMINAL ALPHA-AMIDATION OF PEPTIDES.
-!- CATALYTIC ACTIVITY: PEPTIDYLGLYCINE + ASCORBATE + O(2) PEPTIDYL(2-HYDROXYGLYCINE) + DEHYDROASCORBATE + H(2)O. (THE PRODUCT IS UNSTABLE AD DISMUTATES TO GLYOXYLATE A CORRESPONDING DESCLYCINE PEPTIDE AMIDE).
-!- SUBCELLULAR LOCATION: SECRETORY GRANULES.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                P19021;

FUNCTION: REGULATORY PHOTORECEPTOR WHICH EXISTS IN TWO FORMS THAT FUNCTION: REGULATORY PHOTORECEPTOR WHICH EXISTS IN TWO FORMS THAT ARE REVERSIBLY INTERCONVERTIBLE BY LIGHT: THE PR FORM THAT ABSORBS MAXIMALLY IN THE FAR-RED REGION. PHOTOCONVERSION OF PR IN ABSORBS MAXIMALLY IN THE FAR-RED REGION. PHOTOCONVERSION OF PR IN PER INDUCES AN ARRAY OF MORPHOGENIC RESPONSES, WHEREAS RECONVERSION OF PR CANCELS THE INDUCTION OF THOSE RESPONSES. PER CONTROLS THE EXPRESSION OF A NUMBER OF NUCLEAR GENES INCLUDING THOSE ENCODING THE SMALL SUBBNIT OF RIBULOSE-BISCHOSPHYLL A/B BINDING PROTEIN, PROTOCHLOROPHYLLIDE REDUCTASE, RRNA, ETC. IT ALSO CONTROLS THE EXPRESSION OF ITS OWN GENE(S) IN A NEGATIVE FEEDBACK FASHION.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               SIMILARITY: BELONGS TO THE PHYTOCHROME FAMILY.
